Digital technologies have stimulated and enabled entrepreneurial activities around the globe. In this presentation, Prof. Zahra will discuss the intimate link between digital technology and entrepreneurship, paying special attention to its profound effects on the emergence and subsequent evolution of global business and entrepreneurial ecosystems. He will also highlight the role of digital technology as a powerful source of disruption of ecosystems, describing ecosystems that are likely to undergo such disruption and corresponding implications for international entrepreneurship. The presentation will also discuss the types and characteristics of companies that are likely to emerge as technological disruptors. Finally, Prof. Zahra will address the emergence of “unicorns” in digital-based global ecosystems and the exit strategies they follow.
